SKILLS

- Programming Languages: Python, R, C, C++
- Machine Learning: SQL, MongoDB, Python libraries (e.g., Scikit-learn, NumPy, Pandas, Matplotlib, TensorFlow, Keras), LLMs, Text embeddings.
- Data Science & Miscellaneous Technologies: Data science pipeline (cleaning, wrangling, visualisation, modelling, interpretation), Statistics, NLP, APIs, AWS, Git, Bash, Jenkins, Postman, Docker, Kubernetes, Tableau, Power BI.

EXPERIENCE

AI Developer, September 2024 - Present
REP Group, United Kingdom

- Developed and deployed machine learning models in Scikit-learn using logistic regression to classify narrative text into 6 distinct categories.
- Automated end-to-end report generation using Pandoc, nbconvert, and LaTeX, integrating LLM-powered text summarisation with visualisations in Matplotlib and Seaborn.
- Designed and deployed interactive Shiny and Flask applications on AWS EC2, enabling users to upload, analyse, and download customised reports.

Data Scientist, April 2021 – August 2022
Saal.ai, Abu-Dhabi, UAE

- Enhanced the accuracy of a decision tree classifier in a learning management system, achieving a 10% improvement in user performance prediction.
- Developed user-behaviour clustering based on their engagement and performance metrics, facilitating more personalised user experiences.
- Developed higher order network models to analyse user engagement patterns, resulting in improved accuracy of content recommendations.
- Implemented dashboard APIs using Flask that provided real-time text insights on user performance
- Leveraged NLP with NLTK and implemented a Support Vector Machine (SVM) model to classify chatbot query intents, improving the chatbot's response accuracy by 12%.
- Engineered a web scraper using BeautifulSoup and Gensim, which summarised text content, reducing manual effort.
- Mentored a data science intern for 3 months.

Data Science Intern, January 2021 – April 2021
Saal.ai, Abu-Dhabi, UAE

- Consolidated multiple data sets into a unified MongoDB database, enhancing data integrity and accessibility for cross-functional teams.
- Enhanced model training on limited datasets by employing data augmentation techniques, including normal distribution transformation and noise injection, to improve model reliability.
- Compiled, cleaned, and manipulated large datasets, improving subsequent data handling efficiency.

EDUCATION

Master of Science: Data Science and Advanced Computing
University of Reading – Reading, UK September 2023

- Relevant Coursework: Machine Learning, Data Mining, Data Ethics, Big Data, Probability & Statistics

Bachelor of Technology: Computer Science and Systems Engineering
Andhra University – Visakhapatnam, India September 2020

- Relevant Coursework: Artificial Intelligence, Algorithms, Data Structures, Discrete Mathematics, Linear Algebra, Calculus
